At the first class meeting you were asked to select two others in the course as your “support team.”

Meet with your support team and, with their help and the help of the members of the Computer Science faculty, form a strategy for making regular progress on the senior project. This strategy will vary by individual (people with a fairly solid idea will need to think about updating the proposal or designing code or doing background reading; people with no clear proposal in mind will need a strategy for coming up with an idea; etc.) However, everyone should have

- a time-management strategy that provides time every week (at least several hours) for focused, intense work on the proposal/project
- a set of concrete, realistic weekly goals (possibly these will need to be set from week to week, but you should have at least a set of one or more goals for the upcoming week)
- a plan for how to best make use of your “support team” (for instance, calling one another up with reminders about things like progress reports and deadlines; weekly or bi-weekly meetings to share problems and/or progress reports; maybe even a plan for getting together for a meal or some recreational activity as a way to let off steam)

For Friday, 6 September: Hand in your first weekly progress report. It should include something about the time-management plan and the “support team” plan, but of course might include much more than that if you have been doing reading and/or writing for your proposal. Be prepared to stand in front of the class and give a one-or-two minute status update.
